Sleep Product Recommendations

Kavinace OS

Target the cellular consequences of sleeplessness with a formulation proven to significantly improve both sleep onset and efficiency after the first dose*

- ✓ Blend of ingredients proven to significantly improve both falling asleep and effectiveness after the first dose1*
- ✓ Recommended because you indicated your body's ability to fall asleep is very poor1

Suggested use:
Take 2 capsules at bedtime or as directed by your healthcare provider. Do not exceed suggested use.
If you are pregnant or nursing, consult your healthcare provider before use.

Calm CP

Decreases cortisol levels and provides ingredients important for calm, sleep, and management of blood sugar*

- ✓ Decreases cortisol levels and provides ingredients important for calm, sleep, and management of blood sugar9*
- ✓ Elevated cortisol has been associated with difficulty sleeping10
- ✓ Calm CP is a proven blend of ingredients that has been shown to decrease cortisol levels in as little as 5 days9

Suggested use:
Take 2 capsules one to two times daily or as directed by your healthcare provider. Do not exceed suggested use.
If you are pregnant or nursing, consult your healthcare provider before use.

Foundational Recommendation

Multivitamin

USDA recommends consuming 1-2 cups of whole fruits and 1-3 cups of vegetables per day[15]

Fish Oil

The American Heart Association recommends eating 2 servings of omega-3 rich foods weekly[15]

Fiber

The American Heart Association recommends eating 25 grams of fiber per day[17]

Protein

The American Heart Association recommends eating 8-9 servings of protein per week[18]

Calcium

The USDA recommends consuming 2-3 cups of calcium-rich foods daily for adequate intake[15]

Recommendations and product information provided was requested by the user and is not intended to diagnose, treat, cure or prevent any disease.

Lifestyle Suggestions

Sleep Hygiene

- **Blue Light**: Reducing blue light exposure 2 hours before bed has been shown to improve sleep quality and total sleep time[19]
- **Exercise**: Regular exercise may improve sleep and is best completed several hours before bedtime[20]
- **Caffeine**: Limit caffeine intake several hours before bedtime as it can be disruptive on sleep[20]
- **Nicotine**: Nicotine is associated with sleep issues, contact your healthcare provider for further guidance on the use of nicotine products[20]
- **Alcohol**: While alcohol has been shown to help individuals fall asleep, it may prevent deep sleep and increase awakenings in the middle of the night[20]
- **Manage Stress**: Practice calming and relaxing techniques before bed as stress may contribute to difficulty sleeping[20]
- **Regular Sleep Times**: Practice going to bed at regular times to promote stable sleep and wakefulness[20]
